IT architecture Student

Since October 2021 1337 coding school Benguerir-Morocco

DEUG Economie et Gestion

From October 2019 to August 2021 Faculté des Sciences Juridiques, Economiques et Sociales Cadi Ayyad

Marrakesh, Morocco

baccalauréat science physique

From September 2017 to July 2018 Lycee Youssef Ben Tachafin Demnat, Morocco

Software Development Skills

Projects

Memory Card Game

Technologies Used: HTML, CSS, Vanilla JavaScript

A simple, interactive memory card game that I developed to enhance my skills in front-end development. The game features dynamic user interaction, a responsive layout, and smooth animations.

Dragons Website

Technologies Used: HTML, CSS, Vanilla JavaScript, Docker

A social platform where users can chat with friends, follow them, and invite them to play games. While the project is still in development, I'm implementing features aimed at improving the overall user experience. Docker is used for seamless deployment.

Webserver

Technologies Used: C,C++, Multiplexing

In this project, I built a basic web server to deepen my understanding of server-side development and multiplexing. I explored how to handle multiple client requests concurrently, gaining hands-on experience with server architecture and network communication.

Common Core Projects

Technologies Used: C, C++

As part of my core curriculum, I've worked on several projects that focus on system-level programming and problem-solving, utilizing C and C++ to build efficient and scalable applications.

Languages and Technologies Used

HTML, CSS, and Vanilla JavaScript: I have utilized HTML, CSS, and vanilla JavaScript in two key projects. The first is a simple memory card game, where I focused on building an interactive and dynamic user interface. The second is a website called "Dragons," which offers users an engaging experience, including features such as chatting with friends, following them, and inviting them to play games together, This project is currently in development

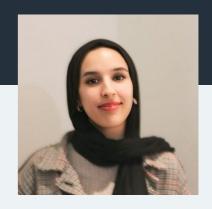

React:

I have a solid understanding of React and continue to enhance my expertise. I have built my portfolio using React, showcasing my ability to design componentbased, interactive front-end applications.

C and C++

I have experience using C and C++ in my common core projects

I have experience using Docker technology to streamline development and deployment processes.

Interests

I am passionate about learning new programming languages and am eager to work in a team environment where I can continually acquire new skills and further develop my abilities.

other skills:

Adaptable and quick-learning IT architecture student with a proven track record in mastering new technologies and programming languages. Demonstrated leadership skills as a project team leader, successfully guiding team members to achieve project objectives and fostering a collaborative environment. Known for excellent communication skills, facilitating effective interactions with clients and colleagues from diverse backgrounds. Highly organized and punctual, consistently meeting deadlines and contributing effectively within crossfunctional teams.
